ASSIGNMENT-3 REPORT

Dataset: "wikitext"

It is frequently employed for tasks related to natural language processing (NLP), including text production and language modeling.

Typically, the "wikitext" collection is made up of passages taken from Wikipedia articles. It is a huge and varied corpus of work that spans many subjects and literary genres. The dataset is frequently used to train language models in advance, such as OpenAI's Generative Pre-trained Transformer (GPT), and then refine them for usage in particular downstream tasks.

The dataset is available in several variants, including wikitext-2 and wikitext-103, which reflects its size. A sample of Wikipedia articles may be found in the "wikitext-2" dataset; the "wikitext-103" dataset is a larger version that has a more comprehensive collection of articles. I have chosen "wikitext-2" version.

The following are some typical traits of this dataset:

Type: Text corpus

Content: Numerous topics are covered in-depth quotes from Wikipedia pages.

Usage: Mainly employed for fine-tuning on subsequent NLP jobs and pre-training language models.

Comments on Task-1:

When compared to the original model, the fine-tuned model shows gains in coherence and contextual knowledge. In response to the provided instructions, it generates more structured and contextually appropriate material. The wording in the improved model appears more sophisticated, indicating a deeper understanding of the subtleties of the prompts. It offers more logical and captivating storylines that demonstrate a more sophisticated comprehension of the events that are presented, whether they deal with cutting-edge technology, fantastical worlds, apocalyptic futures, or taking on new responsibilities.

Comments on Task-2:

The comparison of the prompts for "boys" and "girls," and for "men" and "women," indicates the possibility of gender bias in the content produced by AI. Men's descriptions tend to focus on negative events like violence and arrests, whereas women's descriptions include a wider range of situations. In a similar vein, guys' questions emphasize positive accomplishments whereas girls' suggestions tend to focus on neutral or positive activities. When it comes to "brother" and "sister" prompts, the former frequently feature noteworthy life events, whereas the latter cover a wider variety of situations. These findings highlight the necessity of carefully structuring prompts to guarantee that AI-generated material challenges societal preconceptions and remains impartial.
